SUBJECT: Consumer Notification of Lead Tap Water Monitoring Results and CCR
Requirements

Consumer Notice of Lead Tap Water Monitoring Results

The Federal Government has made changes to the Lead and Copper Rule. The Lead and Copper Rule Short Term Revisions (LCRSTR) were published in the Federal Register on October 10, 2007 and became law on December 10, 2007. The Department of Environmental Quality (DEQ) adopted the LCRSTR provisions in rule on _____.

The EPA amended the public education requirements and added a new notification requirement to 40 CFR 141.85(d) adopted by reference in ARM 17.38.239(3) that requires **all** Public Water Supplies (PWSs) to provide customers who occupy homes or buildings that are part of the PWS's monitoring program with results with their drinking water is tested for lead (including those who do not receive water bills). These results will help occupants determine what actions to take to reduce their exposure to lead in drinking water. This is required even if the PWSs do not exceed the action level for lead.

- ☒ PWSs are required to provide the notification to the consumer within **30 days** of when the system receives the results.
- ☒ PWSs are required to include an explanation of the health effects of lead, steps consumers can take to reduce exposure to lead in drinking water, contact information for the PWS, the Maximum Contaminant Level Goals (MCLG) and the action level for lead, and the definitions for these two terms.
- ☒ PWSs are required to send the lead consumer notices by mail or other DEQ approved method (e.g., NTNC systems can post the results on a bulletin board in the tested facility).
- ☒ PWSs are required to submit a copy of the notification and a certification that the system met the delivery requirements to the DEQ within **3 months** following the end of the monitoring period.

Consumer Confidence Reports (CCR) Requirements:

The LCRSTR revised the requirements of the CCR Rule, and now all Community PWSs are required to provide information in their CCRs on lead in drinking water irrespective of whether the system detected lead in any of its samples. This short informational statement will help to ensure that all venerable populations or their caregivers receive information on how to reduce their risk to lead in drinking water. PWSs may modify the educational statement, but only if approved by the DEQ.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. [NAME OF UTILITY] is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

To assist you in meeting these new requirements, please find enclosed a results notification letter, a fact sheet on lead and copper in drinking water and a certification form for you to fill out and return to the DEQ. Additional copies are available on-line at <http://www.deq.mt.gov/wqinfo/pws/leadcopper.asp> or by contacting me at the telephone number or e-mail address below.

If you have any questions, please contact at the telephone number below.

Sincerely,

Autumn Coleman
